

Excavator Hammer Holder Brentwood Borough, Allegheny County

Problem/Challenge Addressed

When not using our excavator hammer, we needed to figure out a way to store the hammer in an upright position to prevent the seals from getting damaged.

Method/Process/Product to Resolve Challenge

It took one person six hours using a plasma cutter, welder, old ramp from trailer, pipe covers and spray paint to create the hammer holder. The labor cost was \$150. We already had the materials in our shop.

Results/Key Takeaways

New holders were approximately \$1,200. Our hammer holder allows us to store the hammer upright and indoors decreasing the chance for any future repairs to the hammer.
