

Spreader Storage Rack

London Grove Township, Chester County

Problem/Challenge Addressed

We needed an efficient method to install and store salt spreaders that allows for quick removal and installation.

Method/Process/Product to Resolve Challenge

Using materials we already have and eight hours of labor, we utilized an empty wall space to install the rack, which now allows for the use of a portable hydraulic vehicle lift to remove, transport and install the spreaders. This task can now easily be done with just one person. The total cost to build this was \$200.

Results/Key Takeaways

The spreader storage rack allows staff to quickly install and remove spreaders so the equipment can be used for other tasks in between storms.
